- **Designed for Trying-to-Conceive Couples**
- **Isotonic & pH-Matched to Fertile Cervical Mucus**
 - **Doesn't Interfere with Sperm Function**
- **Convenient, Single Use Tubes & Applicators**

BabyDance — A fertility lubricant that works *with* you, not *against* you

When you are actively trying to conceive, sex can often feel like a chore. And, making matters worse, if you suffer from vaginal dryness or lack of cervical mucus, making love can be uncomfortable, or even painful. Many couples who are trying to get pregnant use intimate lubricants to enhance the pleasure and comfort of intercourse. Unfortunately, most everyday commercial lubricants have a low pH and very high salt concentrations, and are harmful to sperm. It goes without saying that using one of these lubricants when you are trying to get pregnant is counterproductive - you don't want your lubricant to make it harder for you to conceive.

BabyDance™ is the first FDA-cleared fertility lubricant made without parabens. Designed specifically for trying-to-conceive couples, the patent-pending BabyDance formula is isotonic and pH-matched to fertile cervical mucus. Shown in studies* to not harm sperm or irritate sensitive vaginal tissues, BabyDance is the perfect lubricant for you when you want to get pregnant!
