

Fairhaven Health Announces New Product To Help Men Preserve Their Fertility

Sperm banking is an effective and affordable way to preserve your fertility, and now you can collect your semen in the comfort of your own home. The NextGen Home Sperm Banking® Kit is an FDA-approved, at-home semen collection solution, intended for men who want to freeze their sperm at a sperm bank.

Bellingham, Washington ([PRWEB](#)) January 06, 2016 -- Fairhaven Health is excited to offer the [NextGen Home Sperm Banking® Kit](#). NextGen is an FDA-approved, at-home semen collection solution, intended for use by men who desire to freeze their sperm at a sperm bank, which will then be used in assisted reproductive technology procedures or to preserve their fertility for the future.

Due to advancements in technology that have made freezing sperm an effective and affordable way to preserve fertility, sperm cryopreservation – also called sperm banking – is increasing in popularity.

Men in their 20s and 30s, who are not yet ready for parenthood, are freezing sperm as a way to extend their fertility. Sperm banking is especially attractive to men undergoing chemotherapy treatments, or those with other medical conditions that impact fertility. Also, military personnel can bank sperm before a long deployment to allow IVF procedures to happen while they are away from home.

But, semen collection has continued to be a barrier for men who wish to bank sperm, sometimes simply due to a long geographical distance to a sperm bank, but more often due to the uncomfortable and stressful nature of the process. NextGen removes this barrier. By providing an at-home semen collection and shipping solution, NextGen eliminates the need for men to have to travel to a clinic or sperm bank to produce a semen sample, and allows men to complete the collection process in the privacy and comfort of their own home.

Ethan Lynette, partner at Fairhaven Health, a leading provider of products for fertility, pregnancy and nursing, commented: “At Fairhaven Health, we are committed to helping men optimize their chances of achieving parenthood. We are excited about the convenience that the NextGen technology brings to the process of sperm banking – it really is a perfect fit in our product line.”

The NextGen Home Sperm Banking kit can be purchased at [fairhavenhealth.com](#) for just under \$500. The kit includes complete instructions, semen collection materials, and everything required for overnight shipping of sample to the state-of-the-art facilities at Cleveland Clinic’s Andrology Lab and Reproductive Tissue Bank in Cleveland, Ohio. U.S. News and World Report ranked Cleveland Clinic as one of the top two urology hospitals in the country in its 2015-16 Best Hospitals issue.
