

Fairhaven Health Introduces TempCue Mobile Basal Thermometer to Help Couples Conceive

Fairhaven Health releases the TempCue mobile basal body temperature thermometer - the latest advancement in ovulation prediction and fertility charting technology. The device connects directly to your mobile device for quick and easy BBT charting.

Bellingham, Washington ([PRWEB](#)) November 19, 2015 -- [Fairhaven Health](#) is excited to release the [TempCue](#) – the latest advancement in ovulation prediction and fertility charting technology. The TempCue is a revolutionary basal body temperature (BBT) thermometer that connects directly to your smartphone, offering fast, accurate and mobile BBT charting. It is also the only basal thermometer designed to connect directly to OvaGraph, the official fertility charting app of Toni Weschler's "Taking Charge of Your Fertility."

The announcement of this innovative product is certain to be welcome news to the hundreds of thousands of women who take their BBT every morning as a way to track their fertility. Charting basal body temperature is a tried and true method for determining a woman's fertility status, and is used successfully by women to predict ovulation for the purpose of achieving pregnancy naturally. By taking and charting basal body temperature every morning, women can watch for the subtle rise in body temperature that follows ovulation, allowing them to determine the fertile days in their cycle.

In developing the TempCue, Fairhaven Health sought to make the device as easy to use as possible. To begin, women download the OvaGraph app from iTunes or Google Play. Next, women simply plug the TempCue into their smartphone or mobile device and take their temperature. The TempCue works with OvaGraph to record and chart the temperature data. OvaGraph's proprietary algorithms then interpret the data according to the Fertility Awareness Method to identify an ovulation date, thereby eliminating the guesswork that can sometimes accompany "old-school" pen and paper BBT charting.

"The TempCue brings BBT charting into the 21st century," said Whitney Palmerton, TempCue Specialist at Fairhaven Health. "It is a convenient and accurate way to chart fertility, and we are thrilled to see women using this tool to help them understand their cycles better, and achieve pregnancy more quickly."
